How to set up High-Availability Masters - Icinga

Note: The maximum node ID for appliances in a high availability setup is 64. It can be any number. For example, you can use the number 2 for the secondary appliance. The number 64 does not indicate that you can have 64 nodes in a high availability setup. It is just a variable value. The high availability setup is always created from two appliances.

How to Set Up a High Availability Pair on ADC

availability. In front of the Apache cluster we create a load balancer that splits up incoming requests between the two Apache nodes.

How To Set Up A Loadbalanced High-Availability Apache Cluster

DON'T set the legs so the pedal anchor is too high off the floor. On the other hand, if you overcompensate and the pedal anchor is too high off the floor, the downward pressure as you push down the pedal will add horizontal movement. This movement would put a strain on the pedal anchor and other parts over time that could lead to malfunction.
